Aperture clamped to f/4 — lens maximum exceeded for Best Match preset

### Learning Mode — Why these settings?

For this outdoor portrait in bright conditions, ISO 800 balances noise with shutter flexibility. f/2.8 separates subject from background while staying 2 stops from lens max for peak sharpness. 1/250s freezes a walking subject. Your combined IBIS + OIS stabilization of 8 stops means you could go as slow as 1/1s for static subjects.
